GENERAL ENGINEERING CONTRACTORS
111 NO. MAIN STREET - P.O. BOX 1146
RIVERSIDE, CALIFORNIA 92502-1146

February, 2005

To Whom It May Concern:

In July of last year, our highway project in Perris, California encountered embedded rock and boulders. We had little success with the hydraulic breakers we brought in to remove the rock. It was determined that we needed something to crack the rock before we put the breakers on it. At that point, we called Expansive Corporation and Benny Barron came right out and explained the expansive demolition process. The next day we applied the product with good results.

We've had need for the product several times over the last six (6) months. After a couple of applications, Benny was able to train our crews on how to drill and apply the product and we've maintained good results. Two (2) of our subcontractors have also had the need for the product and Benny was able to train their crews so they could apply the product quickly and successfully when required. We were very happy with the results the product produced and the good service Expansive Corporation has provided. We would use them again.

Sincerely, Riverside Construction Company
Greg Camp Project Superintendent
